Portable K12 Interoperable WorkStation

Mutualink's K-IWS secure interoperable workstation provides an incident-based, highly intuitive graphical user interface (GUI) that can be effectively used by school personnel to communicate with local public safety dispatchers, as well as with any communication resources within the school. Interconnection of radio channels/talkgroups and video assets is facilitated using Mutualink's drag-and-drop operation. The K-IWS is simple to use and easy to maintain, and serves as the primary operational interface for the Mutualink system. It consists of a standard x86 PC platform (desktop, laptop or 1 RU) running the Mutualink real-time communications application on a Security Enhanced (SE) Linux operating system.

About Mutualink, Inc.

Mutualink is an IP-based multimedia communication resource sharing platform that allows public safety agencies and critical community assets to communicate in a manner that is separate and apart from the general public.
