

## VCD-2 SPECIFICATIONS

The Mutualink VCD converts HDMI to USB so users can share any HDMI video feed into a Mutualink incident on an Edge IWS on Windows® or Mac®.

The VCD works as a standard video input allowing the user to connect to a drone or any external HDMI video source for sharing into an incident. The screen sharing can be any internal document, map or picture, as well as any external video source connected to the computer, such as a camera or VMS system. No separate power cable is required for basic use because the power is over USB.
