VideoPTT™ for Milestone XProtect®

Mutualink's VideoPTT is the key to accessing two-way radio channels and systems right from your Milestone console. It also enables audio and video sharing to smartphone talkgroups to improve safety and reduce loss. Powered by Mutualink Edge, the VideoPTT solution includes a video share feature to collaborate with local police and other first responders from the Milestone platform.

VIDEO

provides
the response.

Video provides information....
adding high-quality audio makes it actionable.

Share Audio and Video

The Edge IWS with Dispatch Console provides the tool to configure talkgroups with radio channels. Combined with the Edge@Team app for smartphones, it puts video in the hands of personnel in the area.

- **Integration of Radio or Smartphone PTT with camera views**

With VideoPTT, cameras are associated with radio channels or smartphone push-to-talk talkgroups for one-click communications between operator and on-scene personnel.

- **Sharing video from XProtect to Talkgroups**

Using the VideoPTT button, video from the Milestone VMS is shared to remote smartphones equipped with the @Team PTT app.

- **Radio Channels and PTT Talkgroups**

The VideoPTT administrator configures talkgroups and radio channels to include the individuals needed to respond.

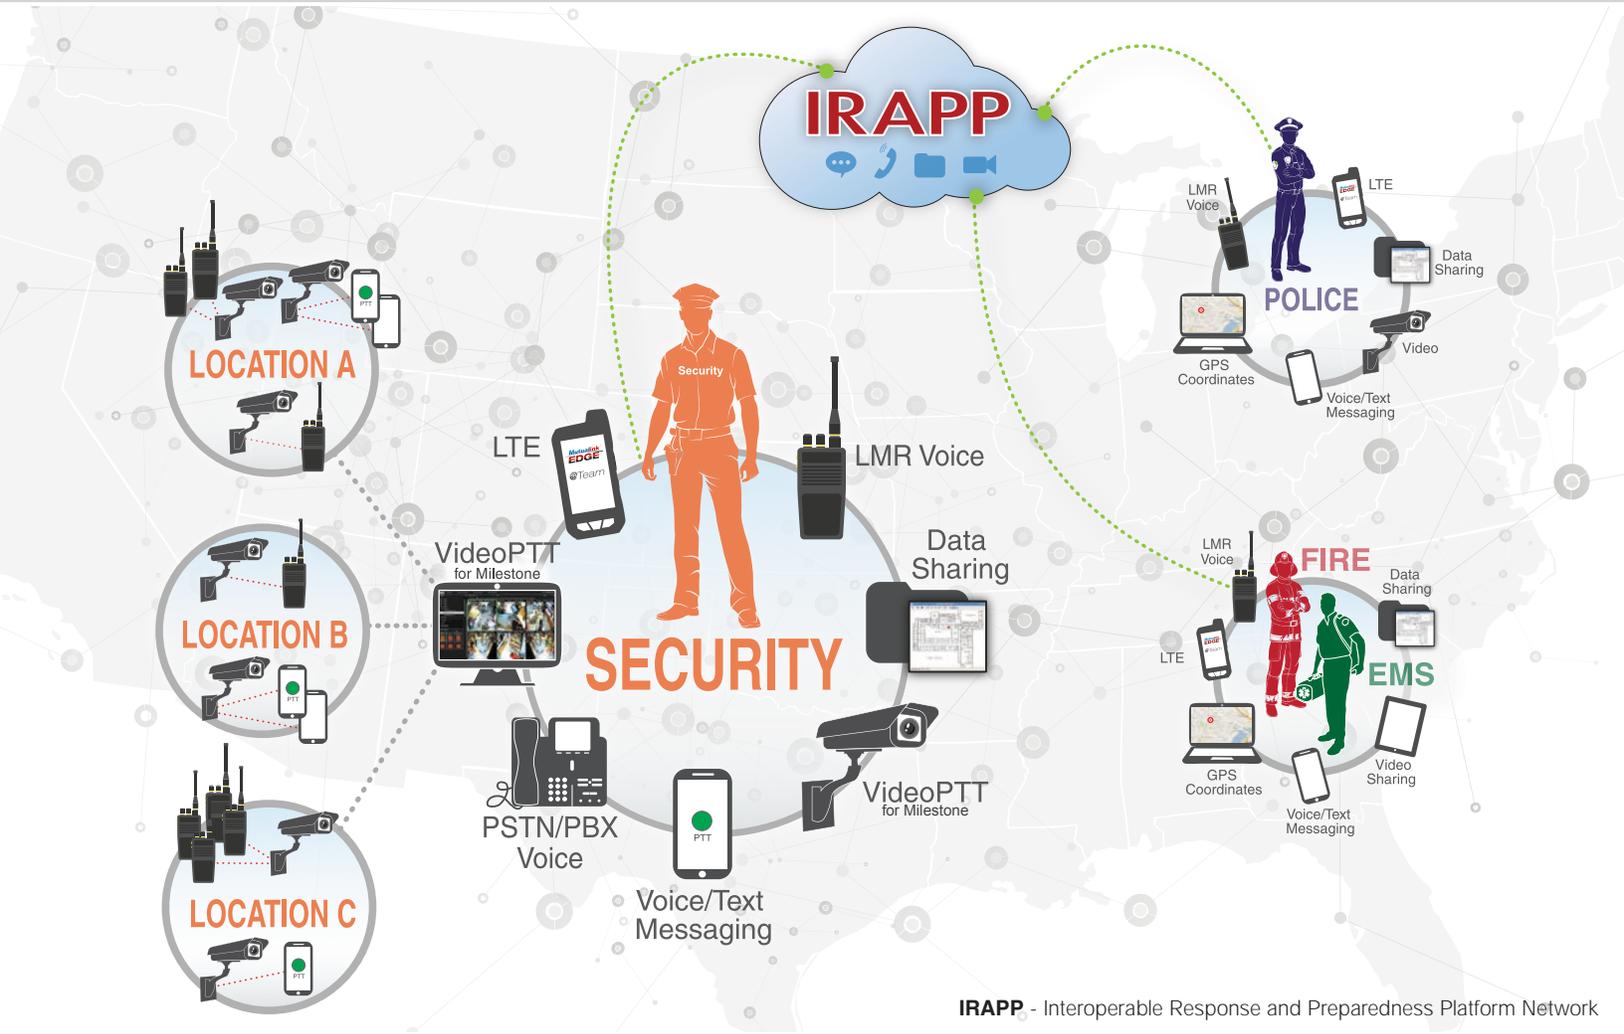

- **Sharing XProtect video with public safety agencies**

The VideoPTT plug-in communicates with Mutualink's Edge IWS Dispatch, which is used to collaborate with first responders as needed.

Mutualink...a Nationwide Network

When every second counts, you need secure, reliable technology.

IRAPP - Interoperable Response and Preparedness Platform Network

Founded in 2006, Mutualink Inc. develops and manufactures communications solutions to help private enterprise and public agencies interoperate.
