CAMPUS SAFETY AND SECURITY

During an emergency, timely resolution saves lives. Built to bring Incident Command System (ICS) best practices to colleges and universities, Mutualink's LNK360 platform instantly connects you to area law enforcement agencies when an incident occurs. This is a scalable solution for daily operations and special events.

MULTIMEDIA ADVANTAGE

Fast And Easy Connections

The Mutualink LNK360 platform gives law enforcement instant access to your institution's radios and video. Our software is easy to add additional first responders into an incident. The system can even be instantly activated by a panic button or sensors. Connect with your local, state, and federal law enforcement agencies.

Scalable

LNK360 instantly shares video footage and radio communications in real time with first responders who are part of the incident. The incident is a communications session that can be set up ad hoc or as a rules-based result of a panic button or sensor event activation.

Customizable Incidents

Create customizable incidents with LNK360 for your specific communications needs - connect with other campus buildings in your system, manage special events, athletic games, drills, protests and be prepared for catastrophic events.

KEY FEATURES

Device Agnostic

In an emergency, most college / university radios cannot communicate with area law enforcement radios. This problem is often cited as a point of failure in school shooter after-action reports. Mutualink LNK360 offers the ability to bridge disparate radio systems when the need occurs. Radio systems can

operate independently until an incident occurs. The platform is device agnostic, connecting disparate radio and video systems.

Interoperability Technology

The Mutualink LNK360 platform incorporates proven interoperability technology that's recognized by the United States Department of Homeland Security (DHS) following the September 11th terrorist attacks. The platform is SAFETY Act certified by DHS.

FERPA Compliant

The Mutualink LNK360 platform protects student and faculty privacy by sharing video only when an emergency threatens, and only at the discretion of college / university administrators.

KEY BENEFITS

Daily Operations

Coordinate daily operations quickly and easily with LNK360's talk group that enables secure, unified communications across buildings and campuses. Every member of the talk group can share audio, video, crucial data, and resources to assist with daily tasks.

Easy Access to First Responders

When first responders arrive on a scene with clear voice and video information, they have the necessary situational awareness to quickly resolve the incident. Other first responders brought into the incident, will have critical information prior to arrival on scene. Saving time in resolving incidents can save lives.

SAFETY, SECURITY AND SITUATIONAL AWARENESS

Multimedia Advantage

- ✓ Save time getting information to first responders prior to arrival
- ✓ Real-time all-hazards communications
- ✓ Broadcast voice, video, text and data to a group
- ✓ Trusted interoperability provider - SAFETY Act Certified
- ✓ Intuitive graphical user interface
- ✓ Full multimedia collaboration: text, streaming video, data, location awareness. And voice, too.
- ✓ Send and receive video and files using your device camera, individual cameras or video management system

"I depend on mutual aid support from the state, local, county, and federal assets for four events. **Mutualink solved a hole in my plan.** Crisis communication. That's always what I worried about, if something happens, they [responding agencies] are on a different frequency, a different platform, you know? How fast can we get together? **Mutualink solves this instantly.**"

— Paul Dean, Chief of Public Safety for the University of New Hampshire and IACLEA President
