

Addressing Increases in Hate Crimes on Houses of Worship

The most recent statistics demonstrate an alarming increase on hate crimes towards houses of worship (table to right). While we all want to see this change, it is crucial to also strengthen security systems and emergency plans to be prepared to enact the best possible response when faced with a tragic attack.

Mutualink empowers a strong, informed, and coordinated response to crises by providing a secure communication channel for seamless coordination, communication, and information exchanging between facilities and their regional public safety agencies. Communicate and transfer vital data, live video stream, smart floor plans and more with first responders and other partners before they even arrive on scene, saving lives and mitigating loss.

Instant, Secure, Life-Saving Communications Between Facilities & Regional First Responders

Mutualink enables houses of worship to connect and share their facility's floor plans, surveillance cameras and 2-way radios with their local police department and first responders in an emergency.

Mutualink is the only solution of its kind that integrates seamlessly with your existing security systems. Make the most of your prior security investments by linking them all on one mutual platform that is reliable, easy to use, and secure.

Beyond the Panic Button | What Happens Next Matters Most

With Mutualink you initiate a coordinated emergency response the instant you trigger a pullbox panic system, portable panic button fob, or panic button smartphone app, as opposed to traditional panic buttons which simply alert the police of an incident. Within seconds of pressing a Mutualink-backed trigger, the appropriate dispatch center and first responders will receive invitation-only access to live surveillance cameras, smart floor plans, and a secure communication channel for your house of worship. This way, first responders can formulate an informed plan of action before they even arrive

Trusted Across the Country | Backed by the Department of Homeland Security

Mutualink was the first solution to be approved by the US Department of Homeland Security, and is deployed in more than 12,000 public spaces across the U.S. Mutualink technology has been used to successfully navigate emergencies and conduct life saving responses in man made, environmental, and high-risk planned events.

PACKAGE 1	Floor Plans & Panic Buttons	Capital Budget Pricing	SaaS Pricing 5 Yr Contract

Need Funding Help? Have Questions? We Can Assist

Despite the critical need for our solution, we know that budgets and funding can be tight. Below are federal grants you may apply for to receive funds for Mutualink products. Additionally, state agencies are bolstering federal funding through their own grant programs. For inquiries about state funding, eligibility, or allowable expenses, please consult your state Department of Homeland Security or contact Mutualink for guidance.

US DOJ The Edward Byrne Memorial Justice Assistance Grant (JAG) Program: <https://bja.ojp.gov/program/jag/overview>
