

NATIVE NATION SAFETY, SECURITY & MANAGEMENT

Built to bring Incident Command System (ICS) best practices to large-scale, independently-run communities, Mutualink's LNK360 platform gives Native Nations the power to invite area law enforcement agencies into their communications resources when an incident occurs. This instant sharing of voice communications, live streaming video and vital data speeds response time and enhances situational awareness, to help first responders better help your community. LNK360 is also a scalable solution for seamlessly managing daily operations and events.

MULTIMEDIA ADVANTAGE

Fast And Easy Connections

The Mutualink LNK360 platform gives your security team 24/7 mobile and desktop access to your system's radios and video. You maintain control of your system at all times, and can instantly grant temporary invitation-only access to first responders as needed.

Video Sharing Mapped On Smart Floor Plans

Mutualink LNK360 plots live video streams on smart floor plans, overlaid on aerial imagery for an interactive experience. When an incident occurs, the videos closest to the alert site are activated, helping first responders achieve resolution faster.

Scalable Solution for Remote Communities

Many Native Nation Communities have broadband and cellular gaps that prevent effective communication during an emergency. LNK360 is a scalable solution that uses multimedia interoperability and dynamic sharing to seamlessly improve connectivity for remote communities and their local emergency teams.

Customizable Incidents

Create customizable incidents with LNK360 for your specific communications needs - connect teams across your large geographic territory and share radios, voice, video, data, locations and more for general safety and security procedures or seamlessly manage operations for parks, casinos, hotels and other facilities.

Beyond Emergency Response: Daily Operations

Coordinate daily operations quickly and easily with LNK360's talk group which enables secure, unified communications across teams in your community, and allows members to easily share audio and video.

KEY FEATURES AND BENEFITS

One System For All Of Your Security Infrastructure

Most Native Nations can't communicate with area law enforcement on their own radios. Mutualink LNK360 is a device agnostic platform, compatible with all radios, videos and panic buttons, and bridges disparate radio systems. Mutualink utilizes your prior security investments by creating one unified system of defense.

Proven & Secure Interoperability Technology

The Mutualink LNK360 platform incorporates proven interoperability technology, SAFETY Act certified by the United States Department of Homeland Security.

Establish Backup and Remote Communications

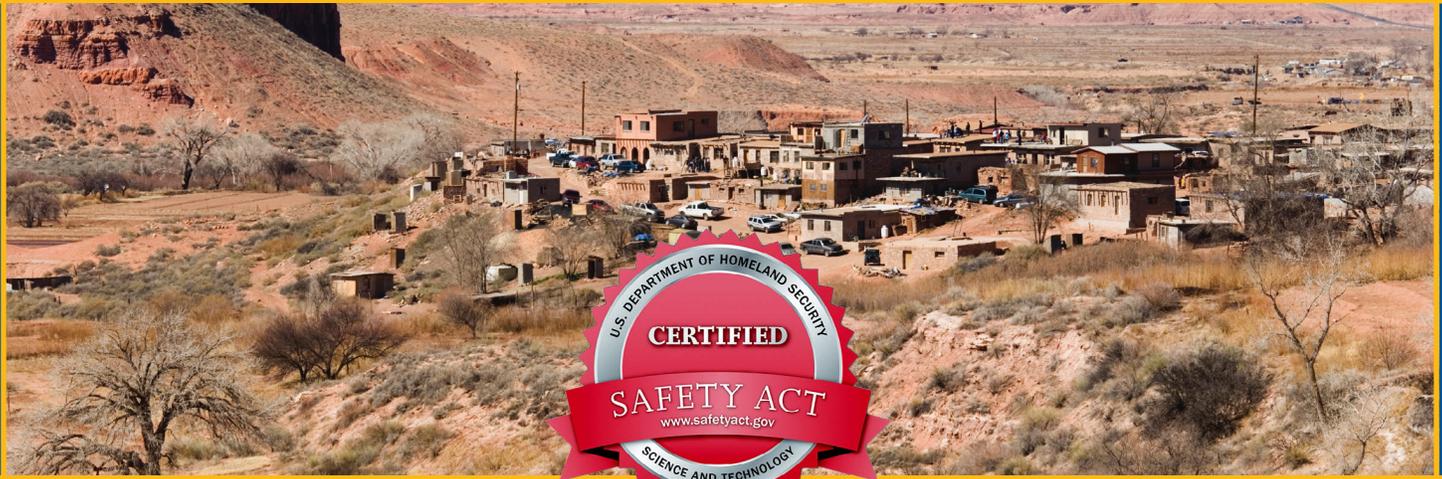

LNK360 ensures continuous communications at all times. When radio towers are unavailable, LNK360 provides backup communications. LNK360 is also deployable on a cell phone, so members of your team can stay in the radio network while traveling.

Talk Groups for Coordination Communications

Establish talk groups for non-emergent yet essential operations via a private, secure channel for your Nation.

SYSTEM AGNOSTIC TECHNOLOGY

Interactive Multimedia Communications

- ✓ Save time by getting all pertinent information to first responders before they even arrive on the scene
- ✓ Real-time all-hazards communications
- ✓ Broadcast voice, video, text and data to customized groups or first responders when needed
- ✓ Trusted interoperability provider: SAFETY Act Certified by the DHS
- ✓ Intuitive graphical user interface
- ✓ Full multimedia collaboration: text, streaming video with cameras plotted on smart floor plans, data, location awareness – and voice, too
- ✓ Send and receive video and files using your device camera, individual cameras or management system
