

# TAKE YOUR EMERGENCY AUTOMATION OPERATIONS TO GREATER HEIGHTS

## LNK360™

### Current Mutualink Edge Customers: It's Time to Upgrade Your Emergency Automation Operation to Our Newest LNK360 Platform

LNK360 is a powerful, intelligent platform that bridges voice, video, data & IoT solutions to help organizations of all sizes build and maintain a connected community. With Mutualink's invitation-based, incident management technology, instant communications and real-time information sharing power data-driven decision making.

### Secure, Seamless Communication

LNK360 is the perfect solution for secure, reliable communication. With our advanced technology, you can communicate quickly and efficiently without worrying about VPNs or separate terminals.

## FEATURES

### Secure & reliable connections

Our LNK360 technology is designed to provide secure and reliable connections that won't drop during an incident or conversation. LNK360 has security over the internet without VPN, so you don't need to worry about being disconnected or having to get reinvited back into an incident.

### Unlock the potential of IWS

Our innovative software requires no additional terminals to run IWS (now called Command Connect). Instead, you can load the software onto your equipment to seamlessly integrate it into your platform.

### Battery friendly

LNK360 is battery friendly for your mobile device, it can run in the background without excessive impact on system resources, and it doesn't require a VPN to connect. This means that your device won't drain its battery as quickly as other applications, making it easier to stay connected for longer periods of time.

### Secure communication anywhere

With LNK360, you can be rest assured that your data is safe and secure, no matter where you are. Our advanced encryption guarantees a secure connection in any environment and our advanced security protocols protect your data from potential threats.

### Cutting edge technology

We use cutting edge technology to ensure that your connections remain strong and secure at all times. Our system is designed to keep you connected even if there are network issues or other disruptions.

### One download for everything

Say goodbye to multiple downloads — with LNK360, you only need one download from the app store for everything you need! Get access to all necessary applications and services in one place, making it easier than ever to stay connected.

### Easy login and steady connection

With LNK360, logging in is easy and stress-free. Just use your credentials to login, and start using the services you need right away. Once in an incident, nothing can evict you: drive through a tunnel, take a call, or even power off the device.

### Never miss an incident invitation

Push Notifications (with battery efficiency) to mobile devices if LNK360 runs in the background and audible push notifications to join LNK360 incident even while logged out from the app.

### Seamless integration across apps

LNK360 plays well with other applications, allowing users to make and receive phone calls and emails without leaving the application. This makes it easy to switch between tasks without having to jump between multiple programs.

### Minimize retraining

With LNK360, you don't have to worry about extensive retraining for your users. Our software is evolutionary so much of the look and feel of Edge remains — this helps to ensure that your users feel comfortable with our platform and minimizes retraining requirements.

### Reliable & efficient communications

LNK360 Administrative Console permits clients to manage their own group of users. Enable and disable user permission in a snap. Keep a handful of IDs for visitors. Build your own secure talkgroups for instant voice communications and multimedia messaging, including photo, video and file sharing.
